Subject: Seeker RAM software for the CM-2

Barbara Lincoln informs me you are interested in the new Seeker RAM Information Retrieval system we've build for the Connection Machine.

How would you like me to deliver it to you? The software is available as a set of binary executables for a Sun4/CM-2 running SunOS 4.1 and CMSS 6.1. The archive runs about 3 Megabytes (compressed). I can uuencode, split and mail it to you, we can use FTP, or we could mail you a QIC-150 cartridge tape. Whatever is easiest, let me know.

Subject: Seeker (RAM Version) Information Request

Would it be possible for you to direct me to a source of information on the Seeker software announced May 7? We already have plenty of information on WAIS servers in general. An anonymous FTP site would be ideal.

We are thinking about setting up a WAIS server on our CM-2 (at the Advanced Technology Labs of General Electric).

Any help would be appreciated.
